By maintaining SQA activities in software development projects, the project has ensured that the project members strictly adhere to the processes and quality standards that customers and companies have set out, as well as early detecting potential problems can have a significant impact on the quality of the product and the software delivery plan for the customer. In addition, the process and quality management capabilities of the project have responded quickly to changing customer requirements throughout the software development process for customers.

For objectively evaluating the processes, work products and services against the process descriptions, standards, and procedures, the SQA team devotes themselves into all software development projects and rapidly reports noncompliance issues to the management level to solve them.

SECURITY AND COMPLIANCE

A Secure Network Environment

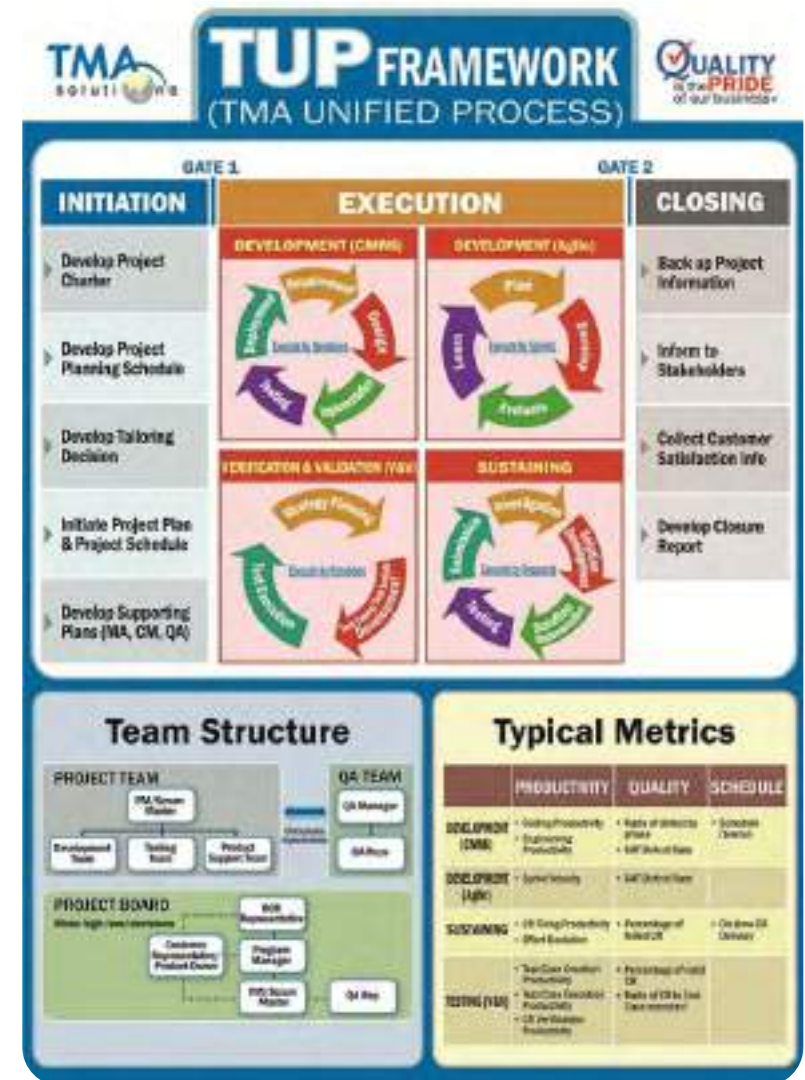

Perform security vulnerability scanning for over 660 testing systems and production systems weekly. The found security issues to be fixed immediately.

Software Products Security
